NowVoice

Free online text to speech with 400+ AI voices and MP3 downloads.

About

NowVoice is a free text to speech online tool for turning scripts into natural-sounding voice audio. It offers 400+ AI voices, support for 13 languages, and MP3 downloads for videos, YouTube, TikTok, podcasts, ads, and e-learning projects. The app runs in the browser, advertises no login required, and includes a simple workflow for pasting text, picking a voice, and generating audio.

What is NowVoice

NowVoice is a browser-based text to speech service that converts written scripts into AI-generated speech. It is positioned as a free online option for creators who need narration, voiceovers, or spoken audio without installing software. The site says it offers

more than 400 natural voices across 13 languages, and it supports downloading the result as an MP3 file.

The product is built around quick generation rather than studio editing. Its interface shows a script box, voice selection, language options, and generation controls, with a character counter and preset examples for common use cases such as storytelling, jokes, ads, meditation, and dramatic scenes.

Key features

- 400+ AI voices, including a listed multilingual voice option.
- 13 language options shown on the site, including English, Spanish, Arabic, Chinese, French, German, Portuguese, Italian, Korean, Hindi, Japanese, Tamil, and Dutch.
- Free online access in a web browser, with no software install mentioned.
- MP3 export for the generated speech.
- 48 kHz audio output is claimed on the site, which suggests a higher-resolution final file for production use.
- Support for different content styles, such as story narration, jokes, ads, movie scenes, game characters, podcasts, and meditation guides.
- A pronunciation setting appears in the interface, which may help fine-tune delivery for tricky words.
- Character limits are clearly stated: 2,000 characters for users who are not logged in and 10,000 characters when signed in.

How to use it

- Open the NowVoice website in a browser.
- Paste your script into the text box. The interface indicates support for long-form content.
- Choose a voice from the library of 400+ options and pick the language or accent that fits your project.
- Adjust settings such as pause or pronunciation if needed.
- Click generate to preview the speech.

The workflow is designed for fast iteration. You can revise the script and generate a fresh take without re-recording a human voice, which is useful for rapid testing of ads, explainers, and short social clips.

Who it is for

NowVoice is a good fit for creators and teams that need a text to speech generator for everyday production work.

- Video creators making narration for YouTube, TikTok, explainer videos, or tutorials.
- Podcasters who want a quick spoken intro or placeholder voice track.
- Marketers producing ad reads, product demos, or promotional assets.
- Educators building lessons, training modules, or e-learning material.
- Anyone who wants to test speech drafts before booking a voice actor.

It may also suit multilingual projects because the site highlights language-specific tools and accent choices. That makes it useful when you need to compare pronunciation across different languages instead of relying on a single generic voice.

What to know before you use it

NowVoice is free according to its site, but the available information does not clearly describe a paid plan, API access, or advanced enterprise features. If you need a service-level agreement, team management, or detailed commercial licensing terms, you should confirm those directly with the official site before relying on it for a production workflow.

A few practical limits are visible in the product copy:

- Unauthenticated users are limited to 2,000 characters per conversion.
- Logged-in users can convert up to 10,000 characters at a time.
- The site claims 400+ voices and 13 languages, but voice quality, accents, and availability can vary by language and selected style.
- The tool is focused on speech generation and MP3 downloads; it does not present itself as a full audio editor, multitrack mixer, or podcast hosting platform.
- The commercial-use statement on the site is helpful, but it is still wise to check the

For factual details like current limits, voice availability, and usage terms, the official NowVoice interface is the best source. If you need guaranteed pronunciation, human performance nuance, or final broadcast-grade editing, use a dedicated audio production tool or a professional voice actor instead of relying only on automated narration.

NowVoice is strongest when you need a fast, free text to speech converter for practical content production, and it works best when you treat it as a lightweight speech generator rather than a complete studio replacement.

FAQ

Is NowVoice free to use?

How many characters can I convert at once?

Can I download the audio as an MP3?
